Modifications to the Pricing Data Pages

Nicholas, Saturday 19 June 2010 - 16:00:39

Between 2006 and 2009 there were 3,000 values entered into our database's price guide. This included prices entered by our bragger community as well as the CBV prices I entered separately.

I recently created a more efficient way for me to enter the CBV values into the site, which means there will be quite a few new prices showing up soon (I already added over 300 in the last few days). Since I'm adding values to coins that already had values, I'm now able to calculate the change in values from this year versus last year(unfortunately 2006 to 2009 were lumped in together).

So now for the CBV prices you'll see 2011 Pricing(this year), 2010 pricing(last year's data) and also the change in value between the years.

All of the pricing data entered by the Coinbrag community will not be affected by this since I keep the user values and CBV separate.
